

IMCO Group Expands Operations with a Series of Strategic Orders for Missiles and Air Defense Systems

Caesarea, May 28, 2025 – IMCO Group (TASE: IMCO), a global leader in the development and manufacturing of advanced systems for the defense and commercial markets, today announced that during the second quarter of 2025, to May 21, the company secured several orders for mission critical components in the fields of missiles and air defense systems from a major defense customer. The total value of these orders amounts to approximately 20 million NIS (about 5.4 million USD) and reflects IMCO’s ongoing expansion into these rapidly growing markets.

Under these orders, IMCO will supply essential components for advanced missile systems and innovative air defense systems. The delivered components will include command, control and operations subsystems, complex harnessing and cabling, and specialized elements for advanced interceptors. The increase in order volume highlights the strong confidence placed in IMCO’s technological capabilities in these domains.

“We are proud to be repeatedly selected as a key supplier of critical components for world-class systems in missiles and air defense systems,” said Ariel Kandel, CEO of IMCO Group. “These orders from a central and valued customer reaffirm confidence in IMCO’s technological expertise, product quality and long-term partnerships. IMCO’s continued growth in this sector is another important milestone in advancing our business strategy to diversify our product portfolio and serve as a strategic partner in enhancing our customers’ capabilities.”

Designing and manufacturing these components requires advanced engineering and technological expertise, the ability to operate under extreme environmental conditions (such as variable temperatures, pressures, shocks, and vibrations), and strict adherence to quality assurance standards to ensure optimal battlefield performance. IMCO’s expanded activity in component supply for missiles and air defense systems marks a strategic step, driven by growing global demand fueled by geopolitical developments and the increasing need among armed forces worldwide.
